VOLUME CALCULATION

Domestic and foreign

The freight price is based on the assumption of 280 kg/m³. The volume is calculated by multiplying length x breadth x height.

Examples: A parcel with the dimensions 0.5 x 0.5 x 0.5 metres has a volume of 0.125 m³

To calculate the volume weight, the volume is multiplied by 280 kg (= 0.125 x 280 = 35 kg).

If the actual weight of the parcel is 18 kg, for example, you pay the freight price for 35 kg (i.e. the higher of the actual weight and the weight calculated according to volume.)
